

BIORESOURCE Engineering

Is it for you?

DID YOU KNOW THAT...

The bioresource engineering program is the revamped version of the agricultural engineering program.

Bioresource engineering has 4 possible areas of focus: water and soil engineering, bio-environmental engineering, food and bioprocess engineering, agricultural engineering.

Are you a nature and technology lover?

Do you imagine a future where technologies will be used to manage natural resources on a sound, sustainable and optimal basis?

WHAT DO THESE ENGINEERS DO?

Plan, develop and implement projects aimed at reducing waste in the environment, rehabilitating contaminated sites, and developing sustainable production systems.

Perform technical analyses of survey data to obtain information on topography, soil, hydrology and other factors, and draft reports.

Participate in the development of alternative sources of renewable energy that meet our energy needs and reduce negative environmental impacts.

Plan, coordinate and manage wastewater and agricultural waste treatment processes.

WHERE DO THESE ENGINEERS WORK?

Agricultural and agri-food industry

Specialized machinery and new technology industry

Environmental and sustainable development consulting firms

Academic institutions

Federal and provincial government

Non-governmental organizations (NGOs) and international development organizations

QUEBEC BIORESOURCE ENGINEERING AT THE HEART OF INNOVATION

Wastewater processed to produce ethanol for Alzheimer medication
An advance in the field of medicine.

AVERAGE SALARY

\$122,028

Genium360, Compensation Survey of Engineering Employees and Graduates in Québec, 2023

PLACE FOR YOU

BACHELOR'S DEGREE IN BIORESOURCE ENGINEERING

4 YEARS

ENDLESS OPPORTUNITIES IN ENGINEERING!
